

E-COMMERCE PRODUCT GALLERY

PROJECT DOCUMENTATION

Internship Details

Candidate Name: Kummetha Mounika

Selected For: Frontend Web Development

Organization: Codtech IT Solutions Private Limited

Duration: 6 Weeks

Internship Period: 06 June 2026 – 18 July 2026

Intern ID: CITS2257

Project Name: E-Commerce Product Gallery

1. Introduction

The E-Commerce Product Gallery is a frontend web application designed to display products in an organized and interactive manner. Users can browse products, search by name, filter products by category, add items to a shopping cart or wishlist, update quantities, and view the total amount before checkout. The application is built using HTML, CSS, and JavaScript.

2. Objective

- To develop a responsive e-commerce frontend application.
- To implement product browsing and filtering.
- To practice JavaScript DOM manipulation and event handling.
- To create an attractive and user-friendly shopping interface.

3. Software Requirements

Hardware Requirements

- Computer or Laptop
- Minimum 4 GB RAM
- Modern Web Browser

Software Requirements

- Notepad
- Google Chrome or any modern browser
- Windows Operating System

4. Technologies Used

- HTML5
- CSS3
- JavaScript

5. Modules

Home Page

Displays featured products and navigation options.

Product Gallery

Shows all available products in a responsive grid layout.

Product Details

Displays detailed information about the selected product.

Search and Filter

Allows users to search products and filter them by category.

Shopping Cart

Users can add products, update quantities, remove items, and view the total amount.

Wishlist

Allows users to save products for future purchase.

Checkout

Displays the order summary and provides a checkout option.

6. Project Workflow

1. Open the application.
2. Browse available products.
3. Search or filter products.
4. View product details.
5. Add products to the cart or wishlist.
6. Update quantities if needed.
7. Review the total amount.
8. Proceed to checkout.

7. Features

- Responsive design
- Product search
- Category filtering
- Shopping cart
- Wishlist
- Quantity management
- Cart total calculation
- Checkout page
- User-friendly interface

8. Project Scope

- Online product catalog
- Frontend shopping application
- Educational web development project
- Easy integration with backend services in the future

9. Advantages

- Easy to use
- Responsive interface
- Fast performance
- Attractive layout
- No external API required
- Beginner-friendly implementation

10. Limitations

- No user authentication
- No database connectivity
- No online payment gateway
- Product data is static
- No order history

11. Future Enhancements

- User login and registration
- Database integration
- Payment gateway support
- Product reviews and ratings
- Order tracking
- Admin panel
- Product management system
- Dark mode

12. Conclusion

The E-Commerce Product Gallery successfully demonstrates the implementation of a modern frontend shopping interface using HTML, CSS, and JavaScript. It includes essential e-commerce features such as product browsing, searching, filtering, shopping cart, wishlist, quantity management, and checkout without relying on external APIs or backend technologies.
